

Custom Animation

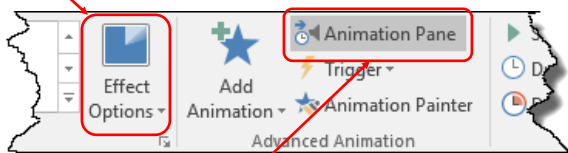

Custom animations can be used to create more interesting and dynamic presentations.

1. Select the text or image you wish to apply animation to, and click the **Animations** tab.

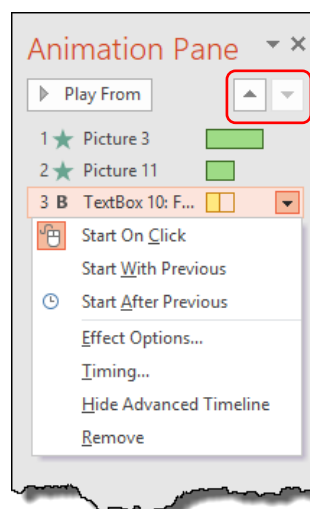

2. Click **More** next to the **Animations Gallery**. You will now see the available animations (grouped into four types of effects, **Entrance**, **Emphasis**, **Exit** and **Motion Paths**).
3. Click on an animation to see the effect on the selected text or object. If you decide not to apply animations after all, click **None**.

If the chosen animation has effect options, the **Effect Options** button will become available. The effect options will vary for each animation.

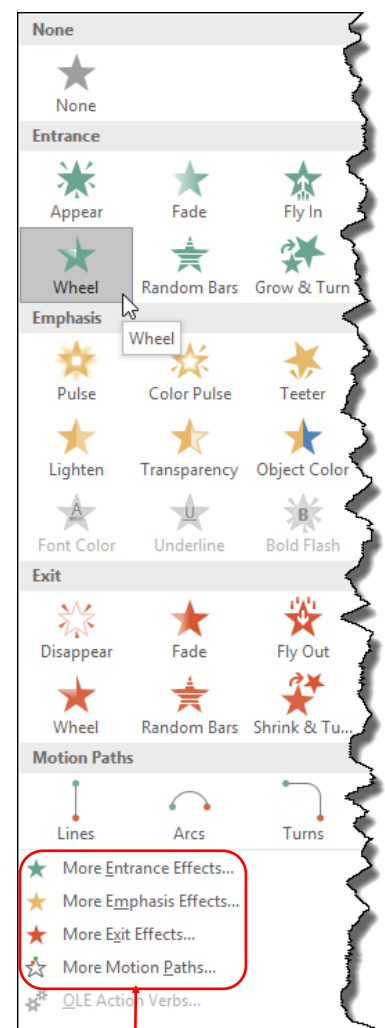

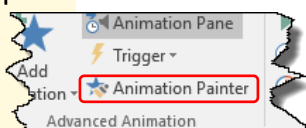

4. Click the **Animation Pane** button. This displays your animations in the order they have been applied. You can re-order animations with the up and down arrows in the top right corner. Additional effect options are available by clicking the down arrow to the right of each animation.

Note:

The **Animation Painter** button copies the animation from one object to another.

Note:

More effects are available from the list in the bottom of the full view of the **Animations Gallery**.
