

Slide Transitions

Slide transitions let you determine how to move from one slide to the next in your presentation. Slide transitions can be applied to the entire presentation or just the current slide.

1. Click the **Transitions** tab, then click **More** to see all available transitions. Choose an appropriate transition.
2. To add a sound effect to your transition, select a sound from the **Sound:** drop-down list, located in the **Timing** group.

Note:

To make the sound continue playing until the presentation encounters another sound file, click the **Loop Until Next Sound** option at the bottom of the list.

3. To set the duration of a transition, enter the number of seconds/minutes into the **Duration:** box, located in the **Timing** group.
4. Tick the **On Mouse Click** box located in the same group to advance to the next slide when you click the mouse or press any of the following keys: Spacebar; Enter; Page Up, Page Down, Arrow keys.

Note:

See the self help guide **Applying Timings to Slides** to find out how to set up the slides to advance automatically.

5. Click **Apply to All** to apply the same transition to all the slides in your presentation. Alternatively, if you would like each slide to have a different transition, you can apply them individually. To remove slide transitions, choose **None** from the list of available transitions.
